

Preferred tools needed for Installation:

- 1- Power Tool: Drill with 5/16" Hex Head Drive or Phillips Head attachment
- 2- Hand tools: Phillips Screwdriver or 5/16" Hex Head Driver

Installation for BIG-HELPER:

- 1- Position the broom on floor and attach the U-bolt around broom handle then push it through the two holes on top front side with the STAND-it! logo facing the front of the broom, secure it snugly with the wingnuts.
- 2- Raise the handle vertically and begin adjusting the Big-Helper up or down until the broom is "standing" on its own. You may need to loosen the wingnut to allow for movement. Finally, tighten the wingnuts for final securement.
- 3- Once the broom is standing, use a drill with a 5/16" Hex Head driver or Phillips driver to attach the four screws into the broom base. There are four mounting points with three adjustment holes each on the Big-Helper, as shown in the diagram below.
- 4- *Due to the unique design of the Big-Helper and its adaptability to a wide range of broom styles it may not attach directly to every broom base, but it will still STAND-it!

*Circles on brooms below represent attachment locations for screws.

Installation for LIL-HELPER:

- 1- Install one screw about 1" from the front edge of the broom and first drill it only 1/4" into the broom base for each Lil-Helper being used.
- 2- Attach Lil-Helper by sliding it under the screw head top going roughly halfway and then tighten the screw down. Begin to stand the broom and then adjust the Lil-Helper by sliding it forward or backward until you have the best angle for standing the broom.
- 3- Finish by installing the second screw about 1" behind the first screw and tightening both screws down firmly to the Lil-Helper.
